

# Health and Movement

Learning Objective:

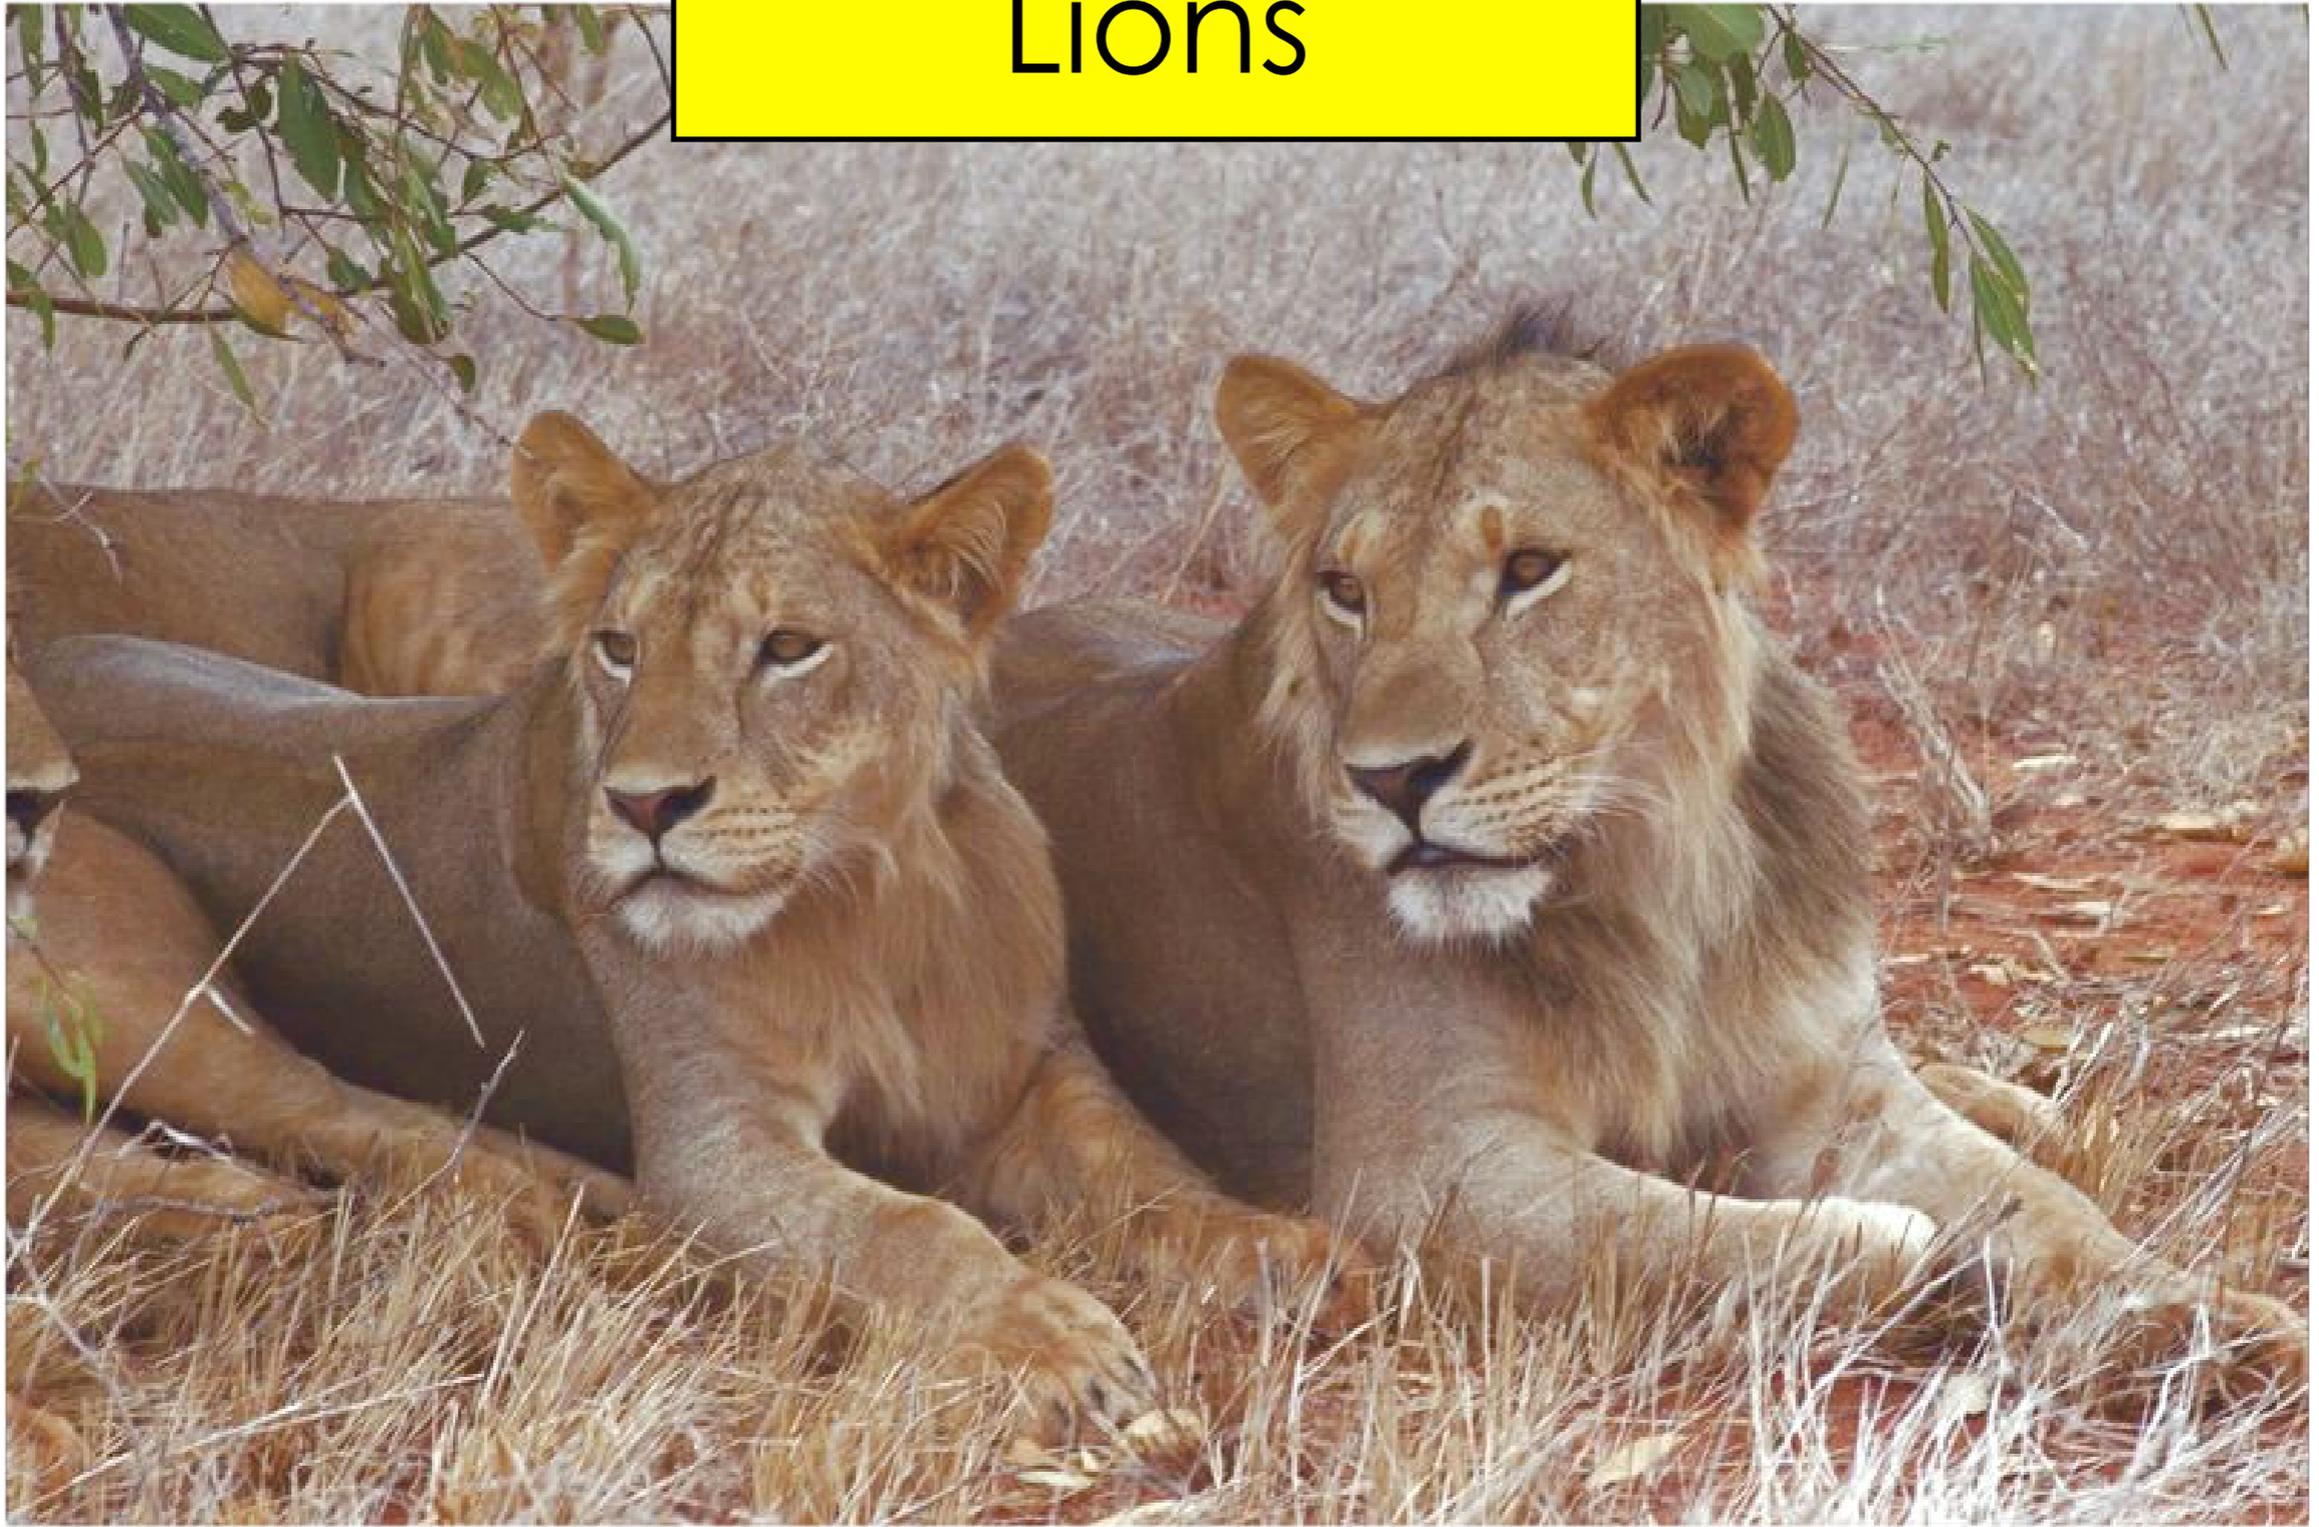

To investigate which foods different animals eat.

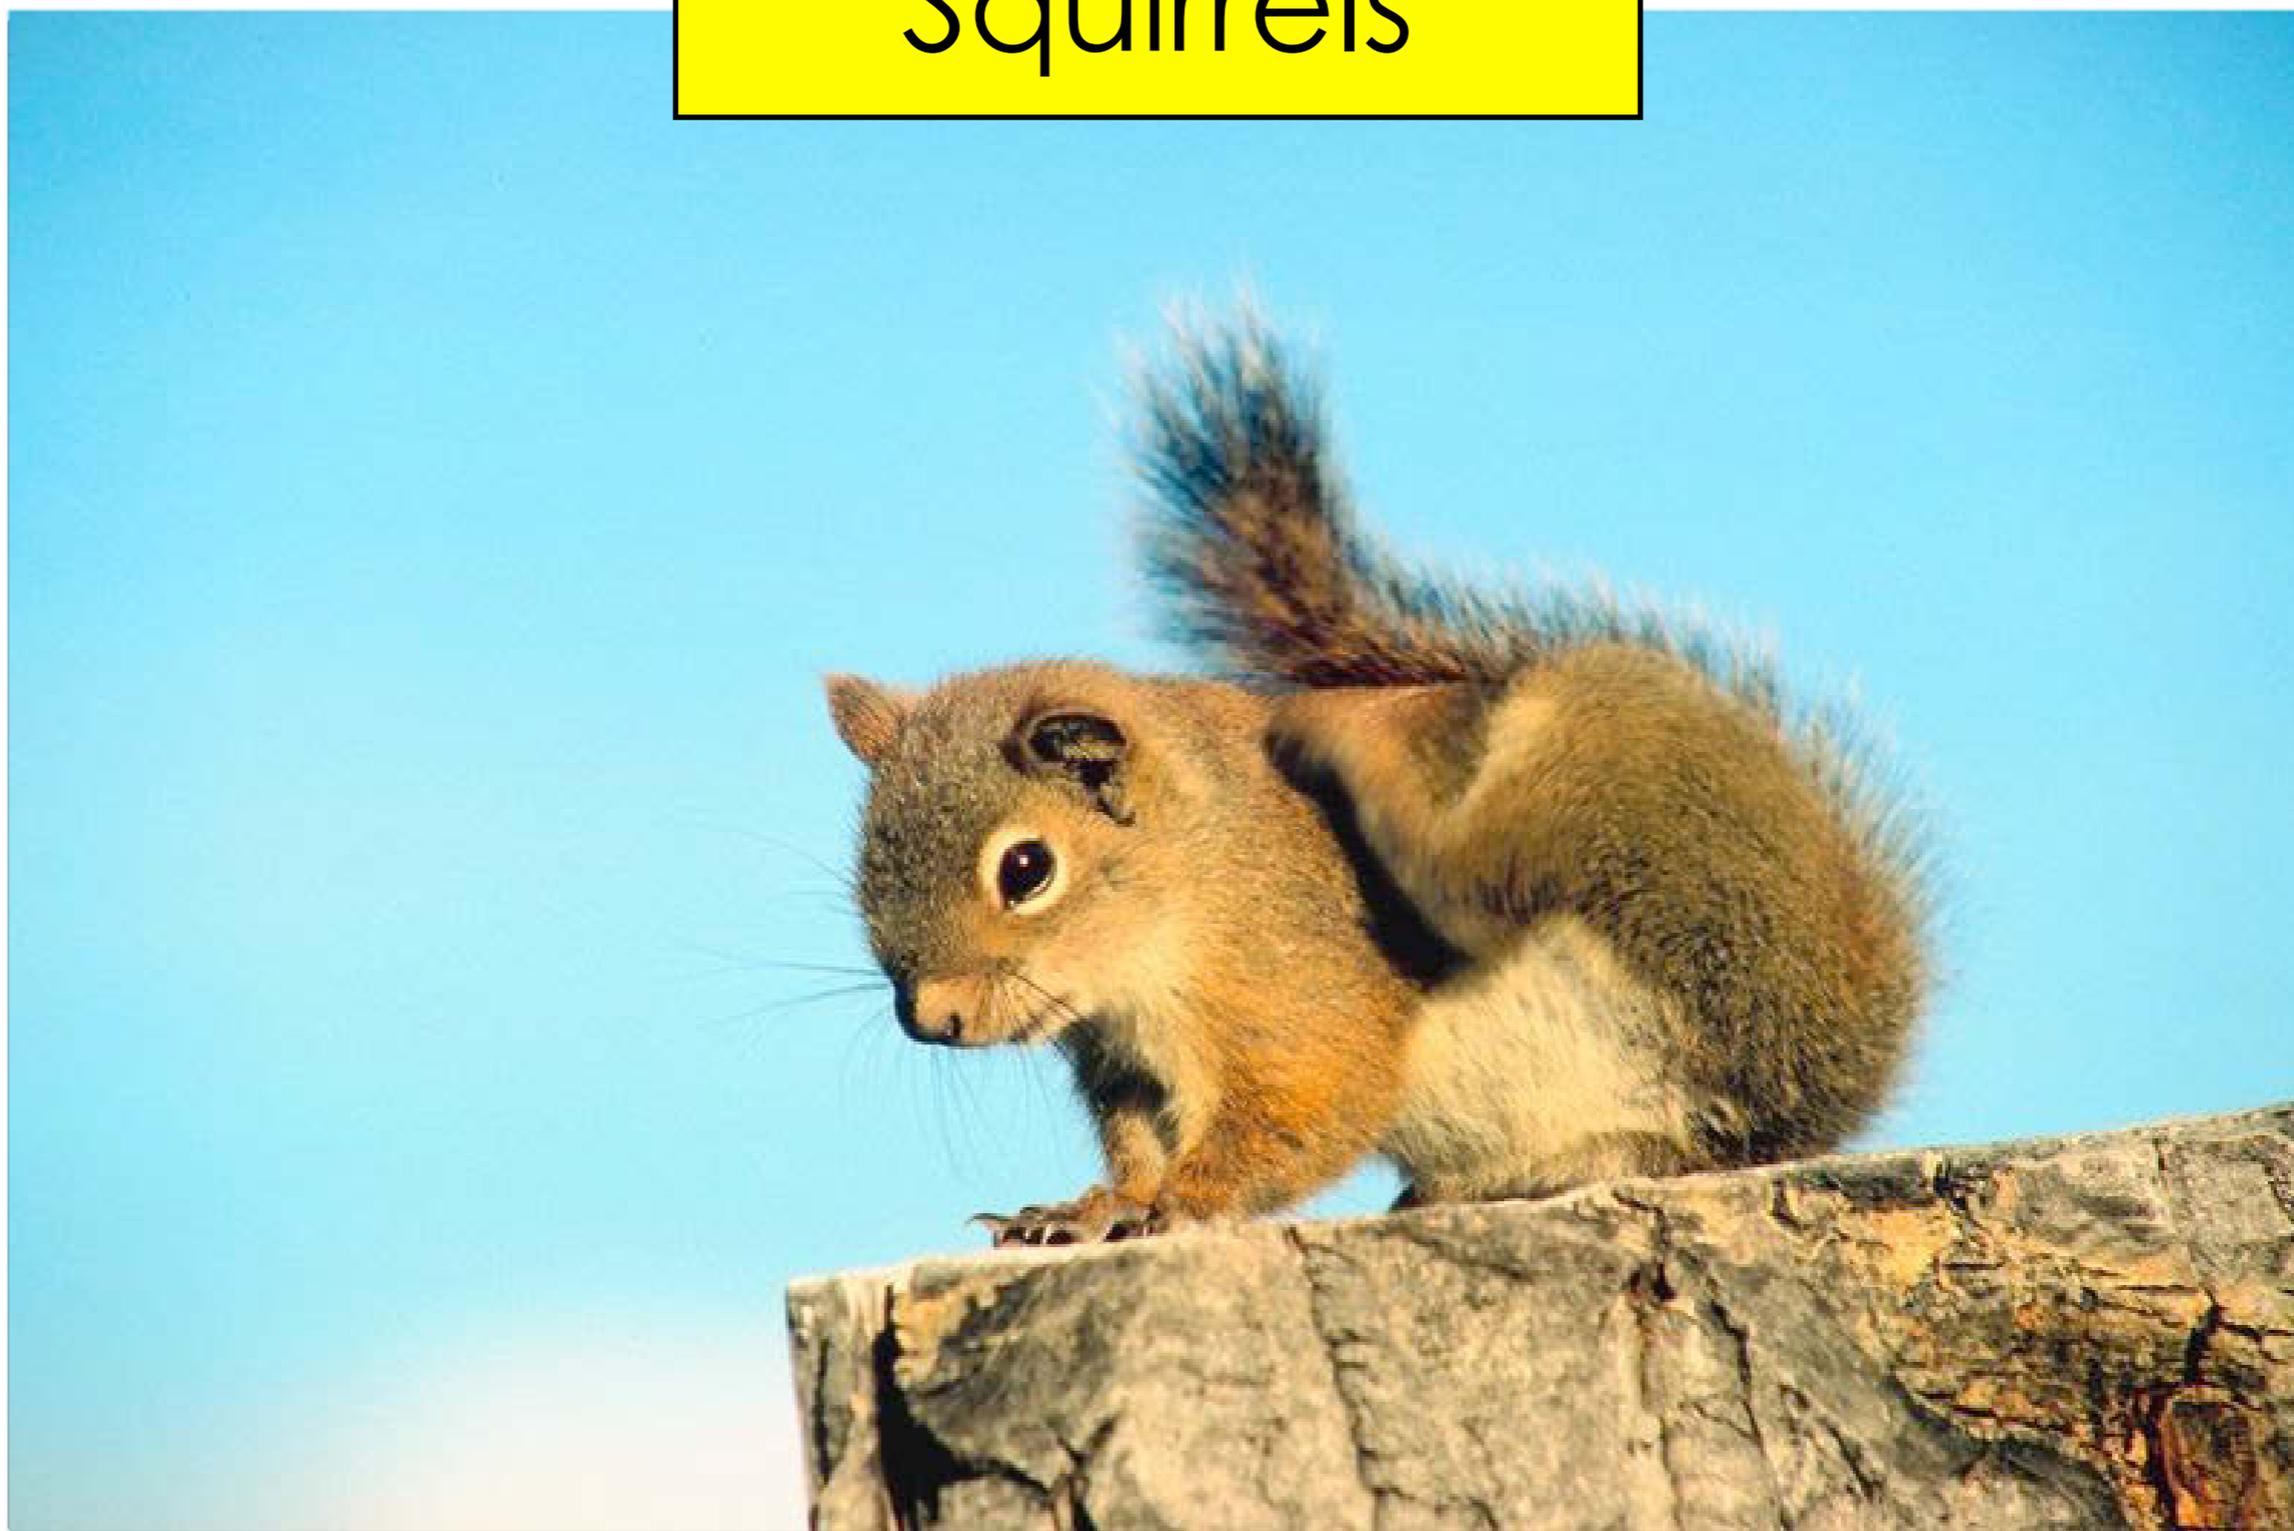

Animals need to eat to get their nutrition, just like humans do. However, animals do not have supermarkets to buy their foods. Have a look at the animals on the next slides. What kinds of foods do you think each of these animals eat? Where do they get food from?

# Lions

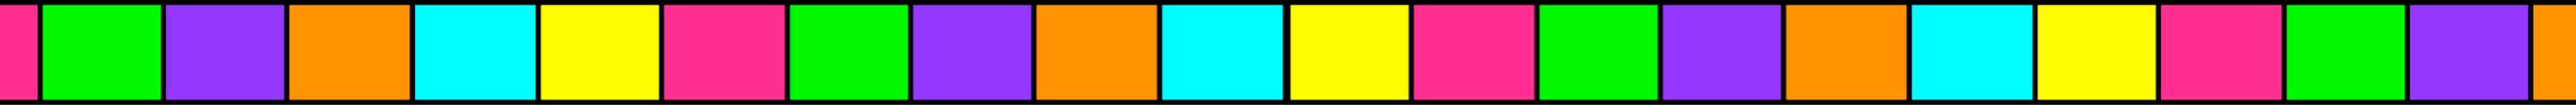

# Squirrels

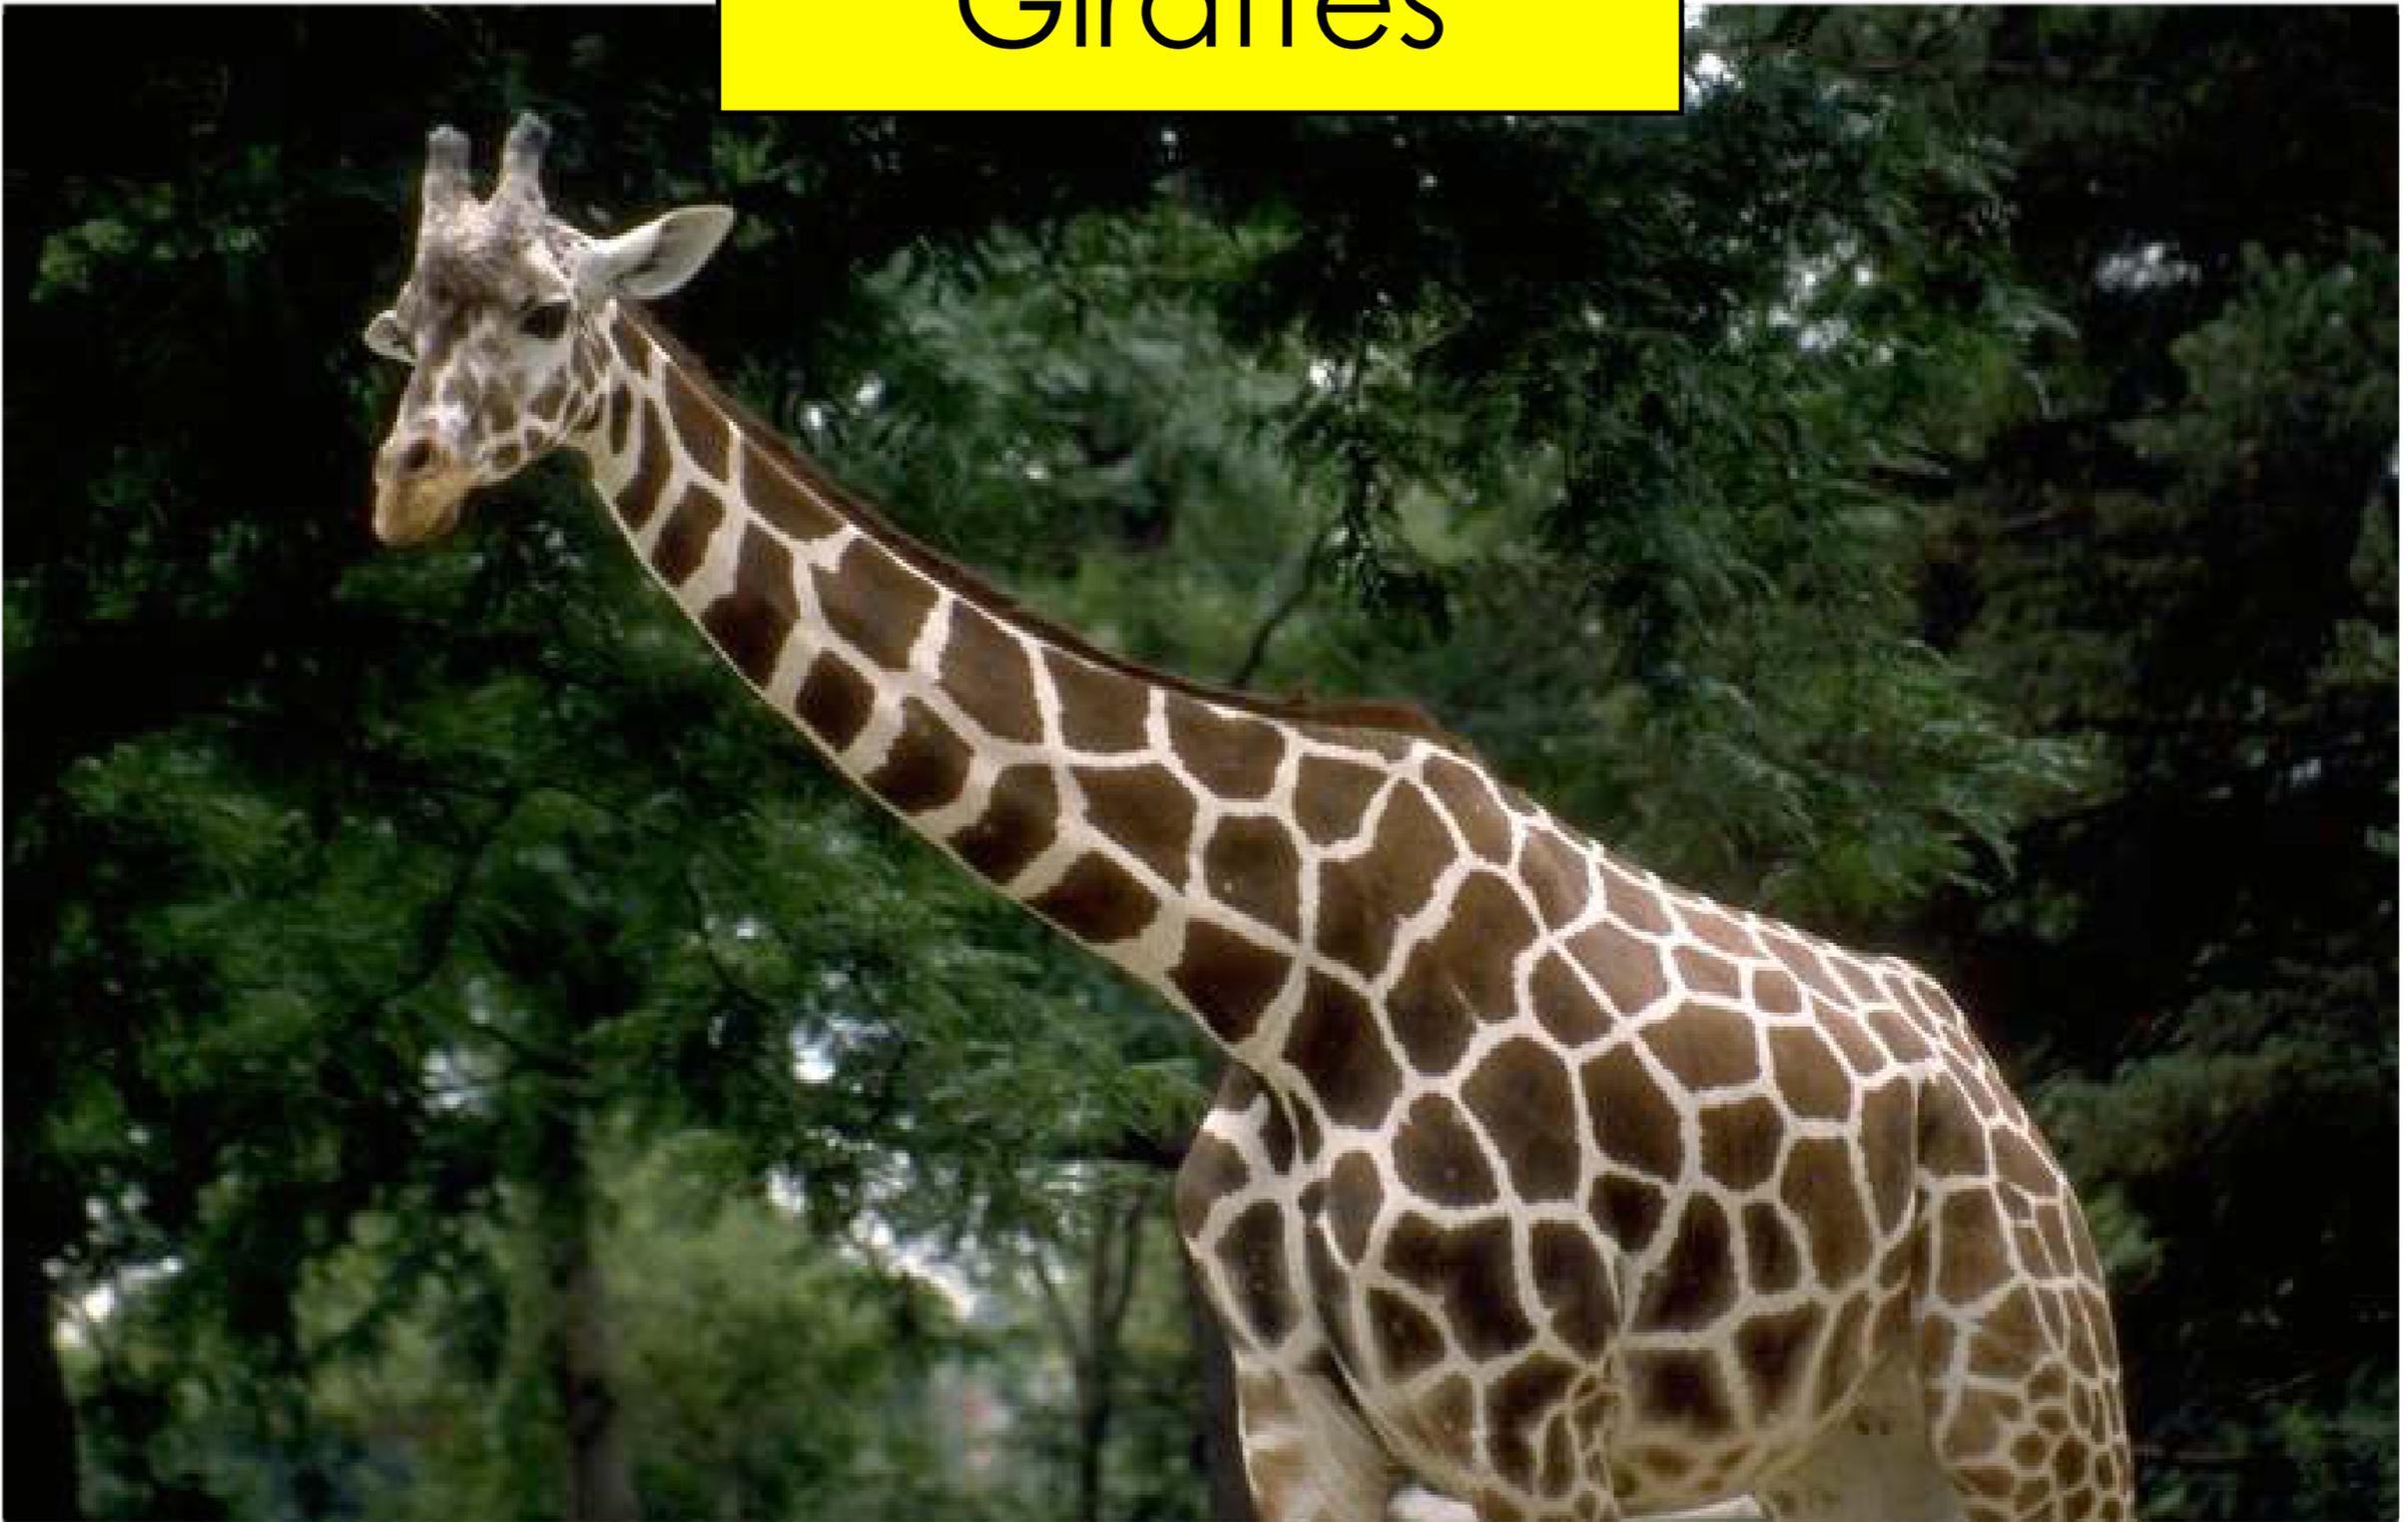

# Penguins

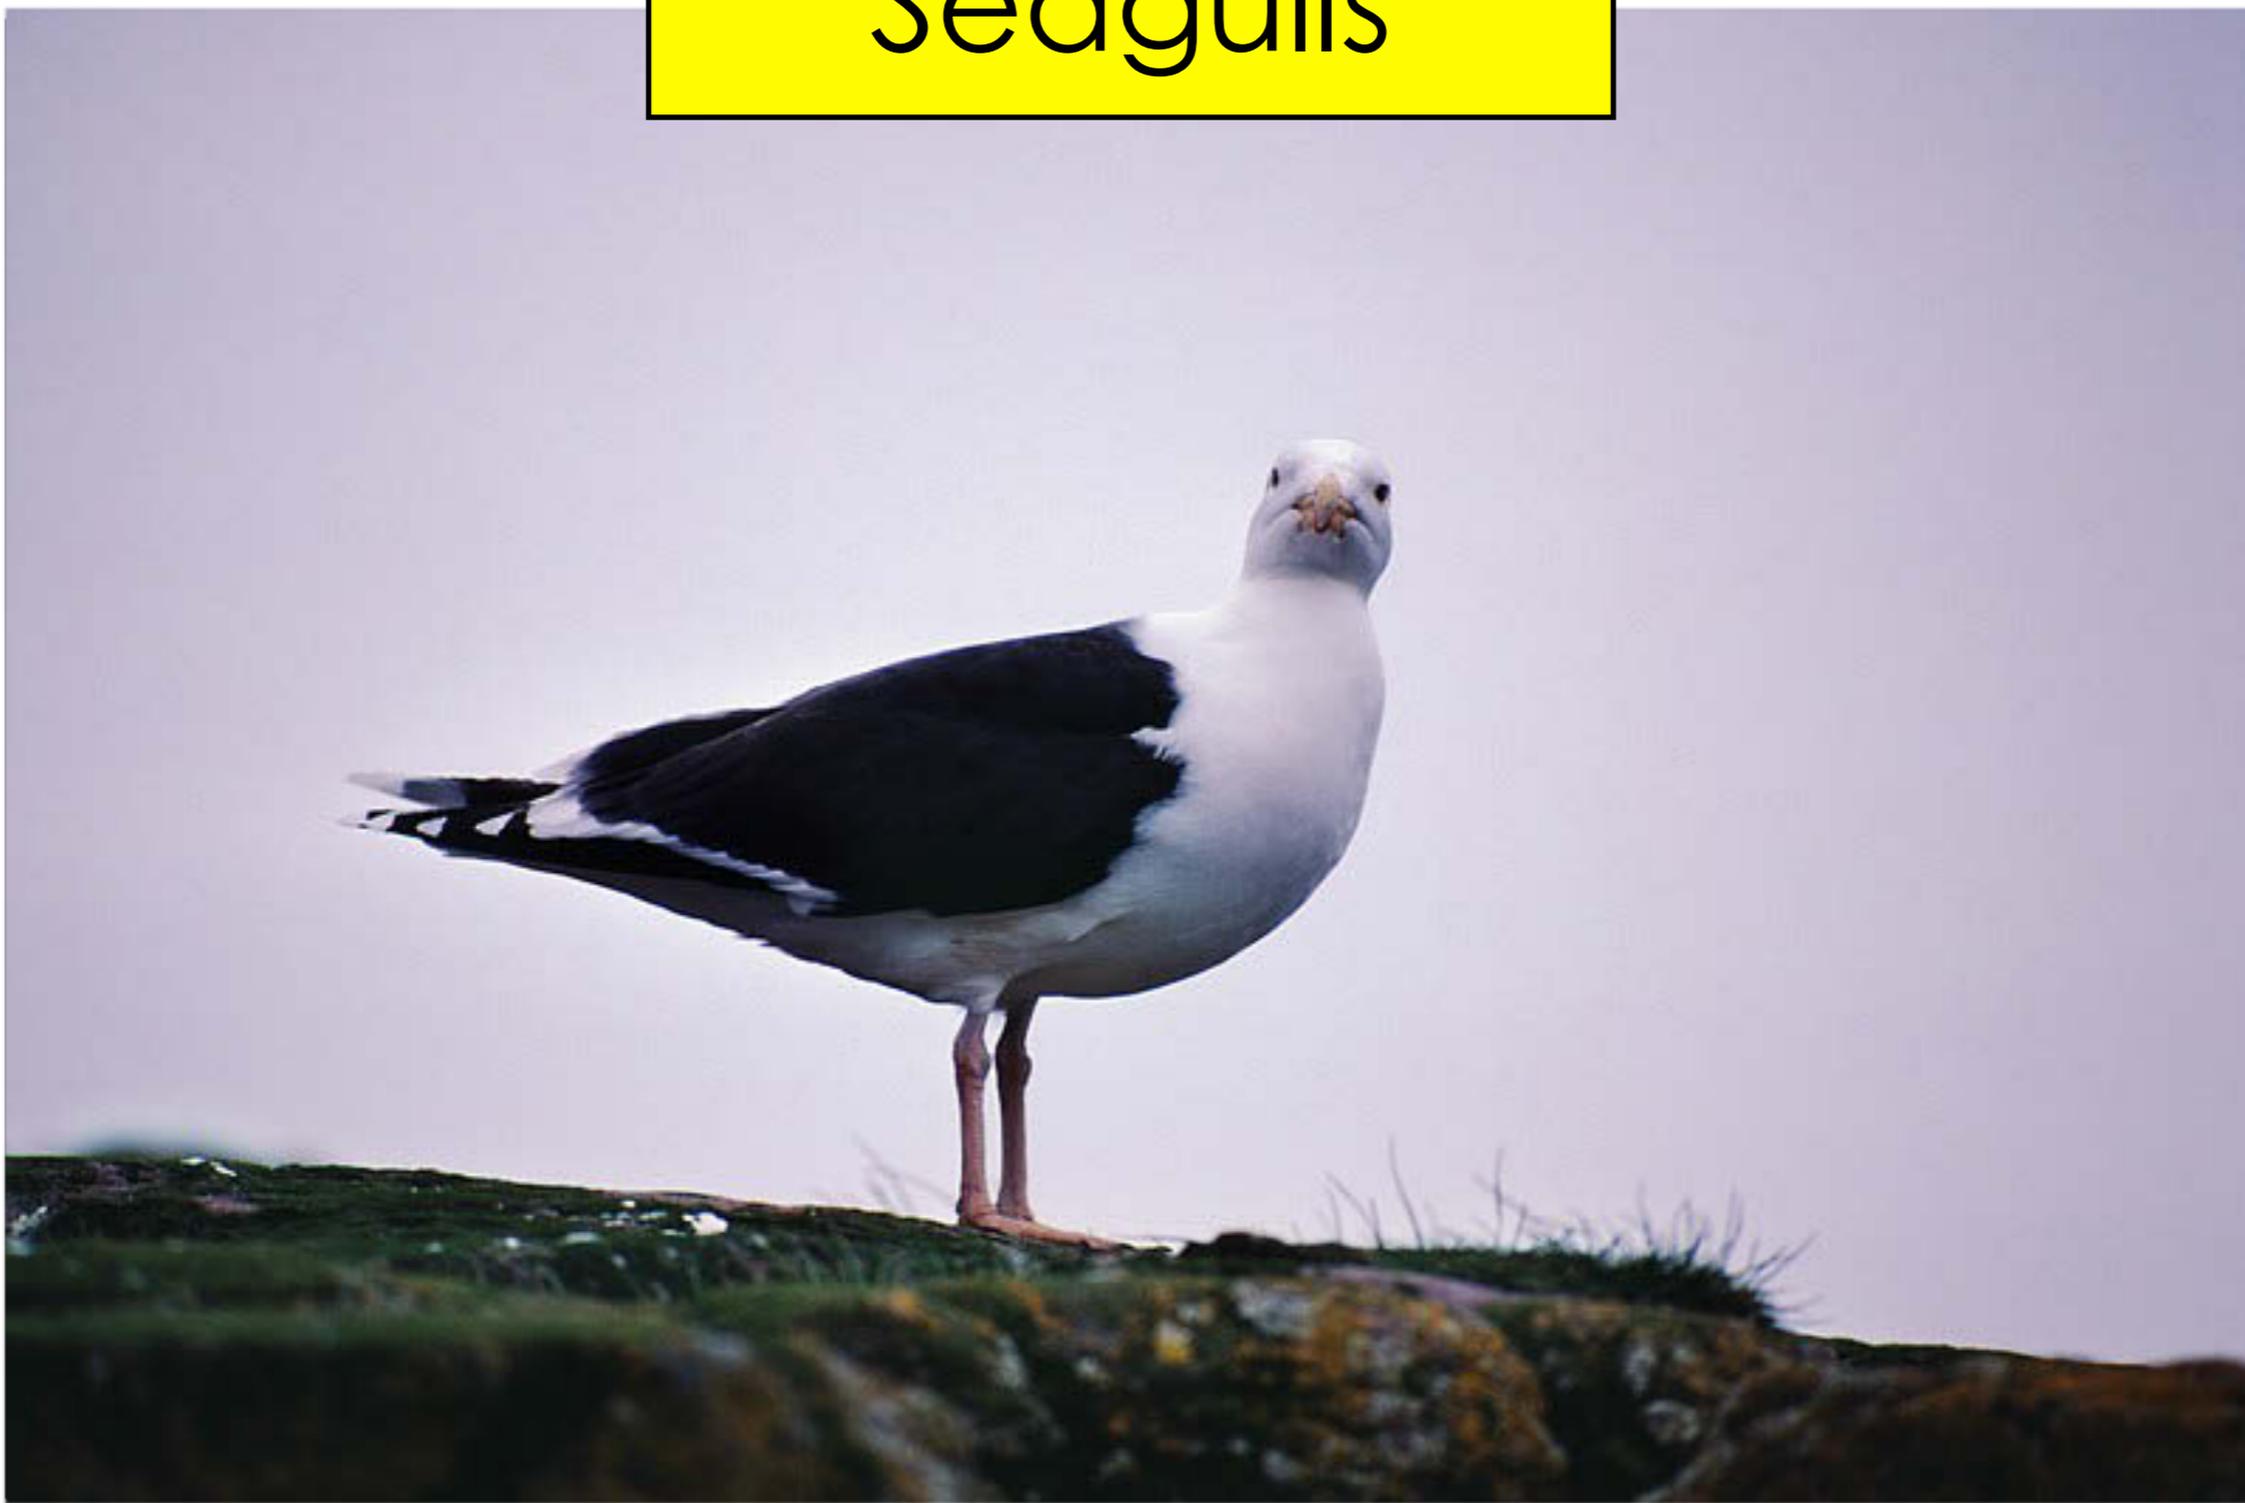

# Giraffes

# Seagulls

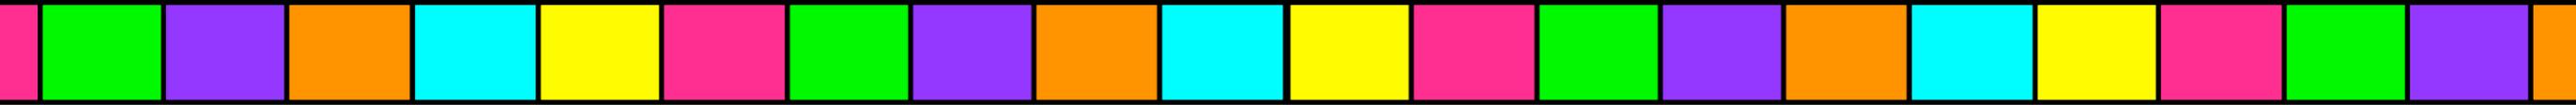

Animals all have different diets depending on where they live and what kind of animals they are.

Some animals are CARNIVORES. This means that they eat meat. Carnivores are PREDATORS which means they hunt and kill other animals for their food. All these animals are carnivores:

Other animals do not eat meat and are called HERBIVORES. Herbivores are often the PREY of other animals which means they are eaten by predators. Herbivores eat fruits, vegetables, seeds and other plants. All these animals are herbivores:

Some animals eat both meat and plants. These animals are called OMNIVORES. Omnivores are usually predators who kill other animals and insects for food as well as eating plants such as fruits. These animals are all omnivores:

Today you are going to finding out what foods different animals eat in more detail.

How can we find out what an animal eats if we don't already know?
